Lucky Chiemerie Nwachukwu

(360) 809 - 2916 | luckychiemerie1@gmail.com | github.com/funkycoder123 | linkedin.com/in/lucky-nwachukwu

Summary of Qualifications

- Software engineer with experience in software development, automation, and technical workflow support.
- **Proficient** in python, Ruby, JavaScript, C++, C#, SQL, and HTML/CSS with a strong foundation in test-driven development.
- Strong leadership experience through career development, and student engagement.
- Strong problem-solving ability with a focus on learning and improving as a developer.

EDUCATION

Bachelor of Science in Computer Science, Minor in Mathematics

Washington State University, Pullman, WA **Expected April 2027**

Relevant Coursework: Advanced Data Structures & Algorithms, Object-Oriented Programming, Full-stack web Development, software engineering, Computer Networks and systems programming.

TECHNICAL SKILLS

- Languages: Python, TypeScript/JavaScript, C/C++, C#, Java, Ruby.
- Frameworks: Django, Flask, React, Next.js.
- Databases: PostgreSQL, MySQL.
- Cloud/DevOps: AWS, Docker, GitHub Actions, Jenkins.
- Tools: Git, GitHub, GitLab, Postman,
- Concepts: REST APIs, JWT authentication, role-based access control, Agile/Scrum, OOP, MVC.

ENGINEERING & TECHNICAL PROJECTS

TruckTap | Logistics Management Web Application

- Building a web platform for small carriers and shippers; secured 10 early trial users to validate product needs and workflow pain points.
- Engineered a freight-matching marketplace with a Django/PostgreSQL backend and Next.js frontend, including load posting, profile management, and real-time shipment tracking across 30+ application screens.
- Designed a normalized database schema and implemented 40 REST API endpoints with JWT authentication and role-based access for shippers, carriers, and admins, reducing authentication errors to under 1% in staging.
- Developed WebSocket-based chat and notification features plus a pricing assistant for density and freight-class estimation, reducing quote time by about 60 seconds per load during testing.
- Set up Docker-based development workflows and GitHub Actions CI/CD with 100+ unit and integration tests running on every pull request to catch regressions early.

ZZU Thrift Marketplace — Full-Stack Web Application

- Built a student-to-student marketplace platform enabling users to buy, sell, and message locally, supporting 50+ product listings with search and filtering functionality.
- Developed backend and frontend features including user authentication (magic link), messaging system, and CRUD operations for listings using JavaScript and Node.js.
- Collaborated in a team environment to design and deliver a working prototype within a limited timeframe, contributing to both backend architecture and feature implementation.

PROFESSIONAL EXPERIENCE

Freelance Software Developer **Apr 2025 - Aug2025**

- Developed and deployed responsive web applications for small projects using Python (Flask, Django) and JavaScript frameworks.
- Built and integrated RESTful APIs to handle user data, application logic, and frontend-backend communication.
- Deployed applications using AWS and Docker, improving reliability and gaining hands-on experience with real-world development workflows.
